

Calculating Tablecloth Dimensions

Assuming a consistent drop length of 150mm around the whole table:

1. Take the drop height and multiply it by two (e.g. $150\text{mm} \times 2 = 300\text{mm}$). This will be your 'drop addition'.
2. Take the table length and add the 'drop addition' from above (e.g. $2000\text{mm} + 300\text{mm} = 2300\text{mm}$). The finished length will be 2300mm.
3. Take the table width and add the 'drop addition' from above (e.g. $1000\text{mm} + 300\text{mm} = 1300\text{mm}$). The finished width will be 1300mm.
4. The finished size to order will be $2300\text{mm} \times 1300\text{mm}$.
